

Muaaz Hanif

Full Stack Development

As a seasoned developer with over 4 years of experience, I specialize in Vue.js, React.js, and Node.js. My expertise spans building scalable, high-performance web applications and crafting intuitive user interfaces. With a passion for adopting new technologies and a proven ability to deliver efficient solutions, I am well-equipped to drive success in any project or team environment.

PERSONAL PROJECTS

Uni Safe Project

- Uni Safe system is used for managing and covering security area of university. Faculty of security department will keep eye on student who are misbehaving and quarreled with each other. This app can be used anywhere where security department facing problem like in colleges and schools and universities. Keeping manual record is not helpful in big institute and where student strength is too much.

forkify

- forkify is the web application build in vanilla javascript. The main work of this application to order the fast food just like food panda app

Glozzom Multi Page Theme

- Glozzom basically three page design task .
